DETAILED ACTION

Information Disclosure Statement

1. Acknowledgement is made of applicant's information disclosure statement.

Allowable Subject Matter

2. Claims 1-3, 7-11, and 15-23 allowed.
3. The following is an examiner's statement of reasons for allowance: The closest prior art, DeHaan et al (US 6, 278, 736, hereafter DeHaan). The prior art does not teach:

A motion estimation unit for estimating a current motion vector for a group of pixels of an image, comprising:

a generating unit means for generating a set of candidate motion vectors for the group of pixels, with the candidate motion vectors being extracted from a set of previously estimated motion vectors;

a match error unit for calculating match errors of respective candidate motion vectors; and

a selector for selecting the current motion vector from the candidate motion vectors by means of comparing the match errors of the respective candidate motion vectors, characterized in that the motion estimation unit is arranged to add a further

Art Unit: 2482

candidate motion vector to the set of candidate motion vectors by calculating this motion vector on basis of a first motion vector and a second motion vector, both belonging to the set of previously estimated motion vectors

wherein the motion estimation unit calculates the further candidate motion vector on basis of the first motion vector and the second motion vector, with the first motion vector belonging to a first forward motion vector field and the second motion vector belonging to a second forward motion vector field, with the first forward motion vector field and the second forward motion vector field being different; and

wherein the motion estimation unit arranges to calculate the further candidate motion vector by means of calculating a difference between the second motion vector and the first motion vector.

A motion estimation unit for estimating a current motion vector for a group of pixels of an image, comprising:

a generating unit means for generating a set of candidate motion vectors for the group of pixels, with the candidate motion vectors being extracted from a set of previously estimated motion vectors;

a match error unit for calculating match errors of respective candidate motion vectors; and

a selector for selecting the current motion vector from the candidate motion vectors by means of comparing the match errors of the respective candidate motion vectors, characterized in that the motion estimation unit is arranged to add a further candidate motion vector to the set of candidate motion vectors by calculating this motion

Art Unit: 2482

vector on basis of a first motion vector and a second motion vector, both belonging to the set of previously estimated motion vectors

wherein the motion estimation unit calculates the further candidate motion vector on basis of the first motion vector and the second motion vector, with the first motion vector belonging to a fourth forward motion vector field and the second motion vector belonging to a first backward motion vector field; and

wherein the motion estimation unit arranges to calculate the further candidate motion vector by means of multiplication of the first motion vector with a predetermined constant and summation of the second motion vector.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
